PERSONAL PROFILE

Data Engineer with hands-on experience designing, building, and maintaining production-grade data pipelines, reporting dashboards, and end-to-end data workflows across Databricks, Power BI, Python, PySpark, and SQL. Strong background in ETL/ELT development, data transformation, semantic modelling, DAX, database optimisation, and performance tuning, including reducing high-impact query execution time by up to 90%. Proven ability to deliver scalable data solutions for analytics, business intelligence, and LLM workloads, while supporting CI/CD, automation, documentation, and cross-functional stakeholder collaboration.

WORK EXPERIENCE

Singapore Telecommunications Limited

Nov. 2025 – Present

Data & AI Platform Engineer, Singapore

- Designed, developed, and currently maintain 7 production data pipelines using Pandas, PySpark, and Databricks, comprising 4 consumer pipelines for Customer 360 view information and 3 enterprise LLM chatbot pipelines for model-ready data preparation, analytics, and downstream business intelligence use cases.
- Designed, built, and currently maintain 3 Power BI reporting dashboards using semantic layers, DAX queries, relationship management, and structured data models to enable reliable business intelligence and recurring reporting.
- Created, optimised, and maintained database tables and views to improve ETL performance, reporting efficiency, and downstream analytics.
- Built end-to-end data workflows from Databricks pipelines to Power BI dashboards, ensuring clean data flow from ingestion and transformation through to business-facing reporting.
- Authored technical documentation with step-by-step logical explanations to support smooth handover, maintainability, and long-term operational continuity.

Accenture

Jun. 2024 – Oct. 2025

Data Engineer, Singapore

- Designed and enforced enterprise-grade database access protocols, managing granular privileges across UAT, Pre-Prod, and Production environments.
- Strategized and reviewed indexing designs to optimise high-impact queries, reducing execution time by up to 90% and improving system performance.
- Developed and maintained over 30% of the team's production-grade ETL logic using advanced SQL stored procedures for transformation and cleansing.
- Built deletion procedures with archival logic to align source, standardised, and cleansed data layers for downstream team consumption.

PROJECTS

ApartmentLab

Self-Hosted Home Lab (CI/CD, Docker, GitOps) github.com/iryandydanish/apartmentlab

- Designed and operating a self-hosted on-premise home lab using Docker Compose with production/pre-production environment separation, GitOps-style CI/CD, GitHub Actions, and shell automation to deliver reproducible, production-grade deployments.

MagnetLover

Telegram Automation Tool (Python, APIs) github.com/iryandydanish/magnetLover

- Python-based Telegram Bot integrating external APIs to automate magnet-link workflows, using modular architecture, environment-based configuration, and event-driven handlers.

EDUCATION

University of the People Expected Oct. 2027

B.S, Business Administration, Singapore

Temasek Polytechnic Oct. 2025

S.Dip, Business Analytics, Singapore

Ngee Ann Polytechnic May 2022

Dip, Chemical & Biomolecular Engineering, Singapore

SKILLS

Languages: Python (Pandas, PySpark), SQL (Databricks SQL, IBM Db2 SQL)

Data Engineering: ETL / ELT Pipelines, Apache Spark, Databricks, Data Cleansing & Transformation, Performance Optimisation

Analytics & BI: Power BI, Jupyter Notebooks

Databases & Platforms: IBM Db2, IBM Cloud Pak for Data (CP4D), Denodo, Tables & Views, Indexing, Access Control

DevOps & CI/CD: Docker, Docker Compose, Git, GitHub, GitHub Actions, GitOps, Linux, Shell Scripting

Agile & Collaboration: Jira, Confluence, Trello

Professional: Stakeholder Communication, Documentation, Delivery & Release Coordination
